Trans. of Zeit[schrift für] Anorg[anische] Chemie (East Germany) 1953, v. 272 [no. 5/6] p. 288-296.

DESCRIPTORS: Metals, *Sulfur, Phase studies, Molecular structure, Physical properties, Catalysts, Catalysis, Ions, Amines.

In analogy with the high and low molecular seleniums, the ring structure of the molecules of the corresponding forms of sulfur is discussed, and given an experimental basis. The splitting open of rings is facilitated by the presence of sulfur ions, and basic amines, and thus they are capable of catalyzing the conversions between the high and low molecular phases. Likewise, they activate sulfur in chemical reactions. (Author)
